

```

Q1. #include <stdio.h>
# struct student
{
    int id; name
    int age, marks;
} s;

void main()
{
    printf("Enter id, age & marks \n");
    scanf("%d", &id);
    scanf("%d %d %d", &id, &age, &marks);
    scanf("%d %d %d", &s.id, &s.age,
        &s.marks);

    if (age > 20 && marks <= 100)
    {
        if (marks >= 65)
        {
            printf("Student is valid \n");
            printf("id: %d", &s.id);
        }
        else
            printf("Invalid \n");
    }
    else
        printf("Age entered wrong \n");
}

```
